## Overview

The code below steps through generating temperature indices from the Bering10K ROMSNPZ model hindcast and projections under NOAA's **ACLIM project** for the Bering Sea. For more information see the ![The ACLIM Repository [github.com/kholsman/ACLIM2](https://github.com/kholsman/ACLIM2) which contains R code and Rdata files for working with data generated from the **downscaled ROMSNPZ modeling** of the ROMSNPZ Bering Sea Ocean Modeling team; Drs. Hermann, Cheng, Kearney, Pilcher, Ortiz, and Aydin. *See Hollowed et al. 2020 for more information about the ACLIM project.*
